Staff / Senior Mobile Engineer (iOS Focus) | Tech Leadership | Platform, Performance & DX

Summary

Full Stack Software Engineer with 10+ years building and modernising mobile products across UtilityTech, FinTech, and HealthTech. Working on cross platform stacks for iOS and Android. A technical leader when it comes to best practices, driving architecture, and providing north star products. Currently working at Lendable in FinTech, helping shape the various financial products through delivery of zero-to-one products, working with the latest technologies including agentic workflows, with a passion for removing friction from the developer experience.

Experience

Lendable – Senior Software Engineer London • June 2026 – Present

Working in several product domains providing technical services and building zero-to-one for the Zable mobile app. Focusing on mobile development for the SuperApp but often working in a full stack capacity rather than being fixed within a single ecosystem, and helping improve the developer experience where possible.

- Identified a tooling improvement which eliminated approximately 1m30s of IC time per commit which on conservative averages equates to a day saved per month per engineer.
- Introduced a graphql mock server to unblock frontend engineers without active services to continue building and shipping code.
- Several zero-to-one products built and shipped as a single developer working across full stack services.

The Economist Group – Staff Software Engineer (Mobile) Birmingham / Hybrid • Apr 2022 – April 2026

Staff (Native) Jan 2024 – Present • **Staff (Cross-platform)** Apr 2023 – Jan 2024 • **Senior** Apr 2022 – Apr 2023

Technical leader within the mobile pillar with a focus on the Content domain (core reading experience). Drive target architecture, roadmap input and OKRs across squads; deliver platform improvements spanning iOS, Android, CI/CD and developer experience.

- Eliminated article scroll “microhangs” on iOS and reduced remaining “Brief unresponsiveness” events by 25%, improving responsiveness in the core reading experience.

- Improved article scrolling performance classification to “Good” at P50 and “Fair” at P95, based on platform performance telemetry.
- Reduced CI feedback loop time by 25% by introducing parallel builds for testing, improving developer throughput and release confidence.
- Co-led migration of core app surfaces from React Native to fully native iOS/Android, improving performance, stability and long-term maintainability while meeting domain OKRs.
- Re-architected audio playback from a global context to a class-based architecture, more than doubling performance and improving maintainability.
- Led creation of multiple native modules and platform integrations, improving stability and unlocking performance gains.
- Authored and led RFCs and platform initiatives improving developer experience and deployment infrastructure across environments (build, test, deploy, rollout strategy).
- Founded and run a Mobile Engineering Community of Practice, mentoring engineers and advocating best practices across the pillar.
- Led AI enablement across mobile engineering, running working groups to evaluate and integrate AI tools into development workflows and establish consistent adoption practices across squads.

Utility Warehouse – Senior Software Engineer (Mobile / Full-stack)

London • February 2021 - April 2022

Early engineer on a cross-platform mobile product serving partners and prospective customers, contributing from inception through delivery and iteration.

- Designed a domain-driven architecture enabling faster feature delivery and clearer ownership boundaries.
- Delivered core mobile capabilities including authentication, analytics, mapping, push notifications, iOS extensions, and native modules.
- Contributed to a shared package to align functionality across products, improving consistency and reducing duplicated effort.

Shell Energy Retail – Lead Software Engineer (Mobile & Web)

Coventry • March 2019 - January 2021

Led technical direction during acquisition/rebrand; transitioned from a legacy cross-platform framework to native iOS/Android while collaborating with web (Next.js) for a cohesive customer journey.

- Led secure authentication across web and mobile using OAuth 2.0 (PKCE) + OpenID Connect, enabling SSO via Curity with a centralised server instance.
- Partnered with backend teams to design mobile-optimised service contracts, offloading business logic to improve performance and accelerate delivery.
- Built and maintained CI/CD pipelines for iOS and Android using Jenkins (daily test builds and release candidates); improved efficiency by ~10% by rewriting pipelines to support parallelism and concurrent builds.
- Integrated Zendesk Chat SDK to improve customer support and self-service; implemented push notification segmentation via Firebase Cloud Messaging.
- Co-authored internal tooling to generate test accounts across environments, reducing manual QA/setup effort.

Elf at Work – Lead Mobile Developer (Contract)

June 2019 - August 2020

Led the rewrite of the mobile app from proof of concept to a production-ready release, deployed to the App Store and Google Play for B2B clients.

- Delivered production-ready architecture and design system scaffolding to accelerate future development and improve maintainability within a 6 month period.
- Designed and delivered SDUI architecture for OTA to scale experiences without requiring frequent client releases.
- Developed a bespoke multi-tenanted partner web portal to support content delivery for the app.

First Utility – Lead Software Engineer (Mobile)

Warwick • August 2018 - March 2019

(Progressed from Software Engineer → Senior → Lead)

Progressed into Lead Engineer through consistent delivery and team leadership; owned sprint execution, shaped platform architecture, and steer roadmap planning during a period of significant product change.

Core 13 – Web Developer

Nottingham • December 2011 - July 2015

Built and maintained custom web and mobile applications in an agency setting, including ongoing support via an in-house CMS.

Skills

Mobile: Swift, SwiftUI, Objective-C, UIKit, Core Data/SwiftData, Kotlin, Java, Android Studio

Cross-Platform: React Native, Kotlin Multiplatform (KMP)

Other languages: JavaScript, TypeScript, Ruby, PHP, Go

Architectures: Clean Architecture, VIPER, MVVM, MVC, modularisation

Frameworks: React, Next, Gatsby

State management: Redux, React Context API, Zustand

Devops: Fastlane, Swift Package Manager (SPM), Cocoapods, Gradle, CircleCI, Github Actions, ArgoCD

Testing: XCTest, XCUITest, Detox, RNTL, Jest

API's & Data: GraphQL(Apollo), REST, SQL, NoSQL, PostgreSQL, Node.js (Express, Koa)

Observability: Firebase, Sentry, New Relic, Tealium, Conviva, DataDog

Delivery & Leadership: Architecture reviews, cross-function communication, mentoring, incident response, Agile (Scrum, Kanban, Lean)

AI: Claude, Codex, MCP integration, Skill creation, prompt engineering and workflow automation

Education

BTEC in Web Development & Information Technology — North West Kent College/Derby College
Distinction, Merit, Merit
